

U.S. Military Baby Delivered Safely

Professor Ji-Yeon Lee, Director of the International Healthcare Center, said, "Our hospital operates a dedicated hotline system with U.S. military medical facilities in Korea and maintains a coordinated care network for high-risk deliveries and newborn emergencies." [...] Hector's parents expressed their gratitude, saying, "From prenatal care to the urgent treatment after birth, everything was handled professionally and kindly."...(Read More)

Robotic Surgery Center

Setting the Standard in Robotic Surgery

Having long been a pioneer in robotic surgery in Korea, Seoul St. Mary's Hospital is now drawing even greater attention for its precise techniques, safe surgical systems, and world-class training capabilities in the field. [...] Moving forward, the hospital aims to define the global standard for robotic surgery not by relying solely on advanced technology, but by fostering a human-centered system rooted in rigorous training and qualification...(Read More)

Living Donor Kidney Transplant After Cancer

— Ms. Lee Regains Health Through Her Husband's Kidney Donation

"The transplant gave me a new lease on life. I hope other patients facing similar challenges can also find hope here."

Today, Ms. Lee Bo Young maintains her health through regular outpatient visits, light strength training, and daily walks. Where she once struggled with fatigue from dialysis, she now enjoys hiking with her family...(Read More)
